SUMMARY

Computer Science Engineering student at RV College of Engineering with hands-on experience in Artificial Intelligence, Machine Learning, Full-Stack Development, and Intelligent Systems. Skilled in developing AI-powered applications, self-healing systems, and scalable web platforms using Python, FastAPI, PyTorch, and modern web technologies. Passionate about building innovative software solutions that solve real-world challenges.

PROFESSIONAL EXPERIENCE

COE-RVCE, AI/ML Intern

11/2025 – 12/2025 | Bengaluru

- Developed a CNN-based deep learning model for COVID-19 detection from chest X-ray images.
- Implemented image preprocessing and augmentation pipelines to improve model performance.
- Evaluated model accuracy using multiple classification metrics.
- Applied deep learning techniques to enhance diagnostic reliability.

PROJECTS

LexoraAI , AI Contract Intelligence Platform

Tech Stack: Python, FastAPI, React, NLP, SQLite

Developed an AI-powered contract intelligence platform for automated clause extraction, risk assessment, contract comparison, and executive reporting. Built NLP-based legal document analysis pipelines to identify critical clauses, contractual obligations, and potential compliance risks. Implemented AI Legal Assistant, contract comparison engine, risk scoring framework, and PDF report generation workflows. Designed an enterprise-grade React dashboard with contract analytics, clause intelligence, portfolio monitoring, and legal insights.

SentinelAI-SOC , AI Security Operations Center

Tech Stack: React, FastAPI, Python, Cybersecurity Analytics

Built an enterprise-grade Security Operations Center (SOC) platform featuring real-time threat monitoring, incident response, and security analytics. Implemented MITRE ATT&CK mapping, SIEM correlation engine, SOAR playbooks, AI threat analysis, and automated remediation workflows. Developed analyst investigation workbench, threat intelligence feeds, attack timelines, and security score monitoring dashboards. Designed interactive cybersecurity visualizations for incident tracking, threat classification, and operational decision support.

Smart Microgrid , AI-Powered Self-Healing Energy Network

Tech Stack: Python, PyTorch, GNN, DRL, Streamlit

Developed an AI-powered self-healing microgrid capable of autonomous fault detection, localization, and service restoration. Applied Graph Neural Networks for grid-state analysis and fault impact assessment across interconnected energy nodes. Implemented Deep Reinforcement Learning agents for intelligent recovery strategy selection and network reconfiguration. Built a real-time monitoring dashboard for topology visualization, node health analysis, restoration history, and performance tracking.

ACHIEVEMENTS

- Developed multiple end-to-end AI and Full-Stack applications.
- Built advanced Machine Learning and Deep Learning projects involving CNNs, GNNs, and LLMs.
- Strong foundation in Data Structures, Algorithms, and Software Engineering principles.
- Active GitHub contributor with project-focused development experience.

SKILLS

Languages

- Python
- C++
- JavaScript
- SQL

AI / Machine Learning

- PyTorch
- Scikit-Learn
- CNNs, GNN and DRL
- LangChain
- LLM Applications
- Document Intelligence
- Risk Analysis
- Predictive Analytics

Web Development

- React.js
- FastAPI
- HTML
- CSS
- Tailwind
- Jinja2
- REST APIs
- Vite

Tools & Platforms

- Git
- GitHub
- Linux
- VS Code
- Streamlit
- MySQL
- SQLite

EDUCATION

Bachelor of Technology (B.Tech), Computer Science Engineering,

RV College of Engineering, Bengaluru 

01/2021 – Present | Bengaluru

Secondary School, St. Thomas School, Gopiganj, Bhadohi

ICSE- 74.8%

High School, St. Thomas School, Gopiganj, Bhadohi

ICSE- 77%

CERTIFICATES

- Infosys Springboard-**
Introduction to Natural Language Processing
- Internshala Trainings-**
Introduction to Data Science

LANGUAGES

- English
- Hindi
